

year once complete fishing year information becomes available. An AM implemented at the start of the fishing year will be reevaluated and adjusted proportionately, if necessary, once updated information is obtained. For example, if in January 2013, the preliminary estimate of 2012 Southern New England/Mid-Atlantic yellowtail flounder catch is estimated to be 5 percent over the 2012 sub-ACL, the Regional Administrator shall implement AMs for the 2013 scallop fishing year in that stock area. Based on the schedule in paragraph (c)(2) of this section, limited access vessels would be prohibited from fishing in the area specified in paragraph (c)(1) of this section for 4 months (i.e., March through May 2013, and February 2014). Continuing the example, after the 2012 fishing year is completed, if the final estimate of Southern New England/Mid-Atlantic yellowtail flounder catch indicates the scallop fishery caught 1.5 percent of the sub-ACL, rather than 5 percent, the Regional Administrator, in accordance with the APA, would adjust the AM for the 2014 fishing year based on the overage schedule in paragraph (c)(2) of this section. As a result, limited access vessels would be subject to a 2-month seasonal closure in March and April 2013. In this example, due to the availability of final fishing year data, it is possible that the original AM closure was already in effect during the month of May. However, the unnecessary AM closure in February 2014 would be avoided. If the Regional Administrator determines that a final estimate is higher than the original projection, the Regional Administrator, if necessary, shall make adjustments to the current fishing year's respective AM closure schedules in accordance with the overage schedule in paragraphs (b)(2)(i), (b)(2)(ii), and (c)(2) of this section.

(f) [Reserved]

[76 FR 43770, July 21, 2011, as amended at 77 FR 20742, Apr. 6, 2012; 77 FR 26122, May 2, 2012]

Subpart E—Management Measures for the Atlantic Surf Clam and Ocean Quahog Fisheries

§ 648.70 Surfclam and ocean quahog Annual Catch Limit (ACL).

(a) The MAFMC staff shall recommend to the MAFMC ACLs for the surfclam and ocean quahog fisheries, which shall be equal to the ABCs recommended by the SSC.

(1) *Sectors.* The surfclam and ocean quahog ACLs will be established consistent with the guidelines contained in the Atlantic Surfclam and Ocean Quahog FMP. The ACL for ocean quahog will then be allocated to the Maine and non-Maine components of the fishery according to the allocation guidelines of the Atlantic Surfclam and Ocean Quahog FMP as specified in § 648.78(b).

(2) *Periodicity.* The surfclam and ocean quahog ACLs may be established on an annual basis for up to 3 years at a time, dependent on whether the SSC provides single or multiple year ABC recommendations.

(b) *Performance review.* The MAFMC staff shall conduct a detailed review of the fishery performance relative to the ACLs at least every 5 years.

(1) If the surfclam or the ocean quahog ACL is exceeded with a frequency greater than 25 percent (i.e., more than once in 4 years or any 2 consecutive years), the MAFMC staff will review fishery performance information and make recommendations to the MAFMC for changes in measures intended to ensure the ACL is not exceeded as frequently.

(2) The MAFMC may specify more frequent or more specific ACL performance review criteria as part of a stock rebuilding plan following a determination that a stock has become overfished.

(3) Performance reviews shall not substitute for annual reviews that occur to ascertain if prior year ACLs have been exceeded, but may be conducted in conjunction with such reviews.
